

Fox News spreads more fake news measles hysteria by claiming MMR vaccines don't contain aborted human fetal tissue... but they actually do

05/03/2019 / By Ethan Huff

Doing its part to shill ridiculous fake news on behalf of the lying vaccine industry, *Fox News* recently published a shameless propaganda piece about the ongoing measles "outbreak," which falsely claims that the MMR vaccine for measles, mumps, and rubella, manufactured by Merck & Co., doesn't contain aborted human fetal tissue – even though it actually does.

Fox News correspondent Bryan Llenas opens up his pro-vaccine shill piece with all sorts of hysterics about how the current spread of measles is the "largest" ever, and that there's "no end in sight." He goes on to claim that "anti-vaccination propaganda" is driving this outbreak, citing statements made by the U.S. Centers for Disease Control and Prevention's (CDC) Dr. Nancy Messonnier, the current Director of the National Center for Immunization and Respiratory Diseases.

According to Dr. Messonnier, the CDC's "biggest challenge" at the moment – meaning the biggest roadblock to the CDC's relentless effort to vaccinate all Americans, including Americans who don't want to be vaccinated – is "misinformation and myths about the vaccine." She's referring, of course, to the controversial MMR vaccine which, despite her parroted claims that it's "safe and effective," is actually neither.
